PROFESSIONAL SUMMARY

Product engineer who ships products end to end — most recently AI products on top of a travel-agency ERP platform: a ChatGPT App built on MCP, live on the OpenAI Apps directory, and an in-ERP AI agent that turns existing commerce data into campaign-ready marketing content. Full-stack across React/Next.js, TypeScript, Kotlin, and Django, with strong ownership of CI/CD and production operations.

WORK EXPERIENCE

Eoding — Jung-gu, Seoul, Korea

Product Engineer | 07/2023 - Present

- Launched “Eoding” travel product search as a ChatGPT App, live on the OpenAI Apps directory: built the MCP server with interactive in-chat product widgets (OpenAI Apps SDK, React) and a TypeScript/Express search API over live ERP inventory covering 6,000+ cities and 84 categories.
- Built “Eoding Canvas,” an AI agent embedded in the ERP that turns the product, price, and promotion data agencies already manage there into campaign-ready banners and product detail pages with zero additional input — deepening platform lock-in (Next.js 16, AI SDK).
- Orchestrated its multi-model image pipeline — Gemini, GPT Image 2, and Grok Imagine with two-stage outpainting and fallbacks — plus mask-based image editing (inpaint/erase-fill) and per-agency quota enforcement (Redis atomic reservation + DB cost tracking).
- Made generation layout-aware: encoded 85+ production banner templates (per-viewport slot sizes, cover-crop math) with auto-computed safe zones, so generated subjects and copy stay clear of the headers, forms, and text overlays each live site renders.
- Led the global launch: localization, KRW–USD multi-currency, and multi-region scalability upgrades to the core server.
- Expanded Terraform and GitHub Actions CI/CD, including production rollback flows.

Eoding — Jung-gu, Seoul, Korea

Full-Stack Engineer | 09/2021 - 06/2023

- Developed the Next.js Web Builder that lets travel agencies self-manage and customize their websites, with Kotlin APIs as the data layer over the Django ERP.
- Designed a unified payment flow integrating four PG providers into the ERP, plus shared authentication across products.
- Built a promotion calendar rule engine (early-bird, multi-night, overlap, min-stay) and “Eoding Live,” a real-time analytics dashboard for reservations, sales, and agency trends.

Eoding — Jung-gu, Seoul, Korea

Software Engineer | 12/2019 - 08/2021

- Co-developed core travel-agency ERP modules (Django), automating product and reservation workflows with real-time ERP-to-web synchronization.
- Led development of the modular Web Builder (React/Next.js) with reusable category, search, and booking flows.

Finfra Co., Ltd — Gangnam-gu, Seoul, Korea

Deep Learning Engineer | 01/2017 - 12/2019

- Deep learning and computer vision projects (Python, TensorFlow); built internal web tools (Elm, Flask).

Korea Software Information & Communication — Seoul, Korea

Cloud Researcher (Deep Learning, Big Data) | 09/2016 - 01/2017

- Deep learning research; implemented a distributed GPU TensorFlow setup and a Hadoop cluster environment.

WongJin Think Cube — South Korea

Software Engineer | 09/2011 - 02/2012

- Built an interactive iPad storybook app (“Kong-Jwi Pat-Jwi”) with reusable animation modules.

EDUCATION

University of Southampton — M.S., Artificial Intelligence | 2014 - 2015

Sangmyung University — B.S., Computer Science | 2007 - 2014

University of Wollongong College — English for Tertiary Studies | 2013

SKILLS

- AI/LLM: MCP (Model Context Protocol), OpenAI Apps SDK, AI SDK, AI agents, multi-model image pipelines (GPT, Gemini, Grok)
- Full-Stack: React, Next.js, TypeScript, Node.js, Kotlin, Django, Python
- Infra & CI/CD: GitHub Actions, Terraform, AWS (ECR, ECS, S3), Docker
- Data: MariaDB, Redis
- ML: TensorFlow, computer vision
